Berdasarkan pembagian yang telah dilakukan, penulis mendapatkan salah satu data untuk menentukan lokasi kategori produk dan banyaknya area pada rak yang akan diberikan pada sebuah produk. Produk yang laku (*fast moving product*) akan diberikan area yang lebih besar dan produk yang lebih tidak laku (*slow moving product*) akan diberikan area yang lebih sempit sehingga calon pembeli dapat menemukan produk lebih mudah.

Data selanjutnya adalah mengklasifikasi kategori produk yang ada pada Ritel X menjadi beberapa klasifikasi, yaitu *merchandise division*, *merchandise department*, *merchandise group*, *merchandise family*, dan *merchandise subfamily*. Penulis menggunakan kategori produk yang berasal dari data penjualan Ritel X yang merupakan klasifikasi *merchandise family* dan *merchandise subfamily* dan kemudian menentukan *merchandise division*, *merchandise department*, dan *merchandise group*. Hal ini dilakukan karena penyebutan klasifikasi yang ditetapkan setiap ritel bersifat subjektif dan dapat berbeda-beda antar satu ritel dan ritel lainnya. Data pengklasifikasian pun telah diinput kedalam program kasir yang digunakan oleh Ritel X. Penggunaan klasifikasi *merchandise family* yang sama akan memudahkan Ritel X untuk memahami planogram. Hasil pengklasifikasi dapat dilihat pada tabel 5.2.

Hasil klasifikasi digunakan untuk membantu proses penyusunan layout ritel dengan metode ARC (*Activity Realtionship Chart*).

Bagan ARC biasanya digunakan untuk membantu pembuatan layout pabrik dengan mengisi aktivitas produksi, derajat kedekatan aktivitas, serta alasan kedekatan aktivitas pada bagan. Karena bagan ARC yang pengisiannya bersifat kualitatif, maka penulis memanfaatkan bagan ARC dengan mengganti kolom aktivitas dengan kategori produk yang ada. Selebihnya bagan tetap diisi dengan derajat kedekatan dan alasan derajat kedekatan.
