LAMPIRAN 1 KUESIONER PENELITIAN
PENGARUH ELECTRONIC-WORD OF MOUTH (E-WOM) DAN
KOMUNITAS ONLINE TERHADAP NIAT PEMBELIAN PADA PRODUK
SOMETHINC DENGAN KEPERCAYAAN MEREK SEBAGAI
VARIABEL MEDIASI

KUESIONER PENELITIAN

Pengaruh Electronic-Word-of-Mouth (E-WOM) dan Komunitas Online Terhadap Niat Pembelian Pada Produk Somethinc dengan Kepercayaan Merek Sebagai Variabel Mediasi

Pertanyaan *Filter*:

1. Apakah Anda mengetahui merek Somethinc?
 - a) Ya
 - b) Tidak
2. Apakah Anda pernah membaca ulasan/komentar tentang produk Somethinc secara online?
 - a) Ya
 - b) Tidak
3. Apakah Anda terlibat dalam komunitas online atau forum yang membahas produk kecantikan atau perawatan kulit? (seperti: Female Daily dan forum sejenisnya)
 - a) Ya
 - b) Tidak

Data Responden:

1. Jenis kelamin
 - a) Pria
 - b) Wanita
2. Pendidikan terakhir
 - a) SMA/SMK
 - b) Diploma
 - c) Sarjana
 - d) Pasca Sarjana
3. Profesi

- 
- a) Pelajar / Mahasiswa
 - b) Wiraswasta
 - c) Pegawai Negeri
 - d) Karyawan Swasta
 - e) Lainnya
4. Pendapatan/uang saku Anda per bulan
- a) < Rp 1.000.000
 - b) Rp 1.000.000 - Rp 3.000.000
 - c) Rp 3.000.001 - Rp 5.000.000
 - d) Rp 5.000.001 - Rp 10.000.000
 - e) > Rp 10.000.000
5. Sosial media yang paling sering Anda digunakan
- a) Instagram
 - b) TikTok
 - c) Facebook
 - d) X (Twitter)
 - e) Lainnya
6. Platform belanja online yang paling sering Anda gunakan untuk membeli produk perawatan kulit dan kecantikan
- a) E-commerce (Shopee, Tokopedia atau sejenisnya)
 - b) Social commerce (TikTok Shop, Instagram Shop atau sejenisnya)
 - c) Beauty e-commerce (Sociolla, Female Daily, Beauty Haul atau sejenisnya)
 - d) Website resmi dari merek produk kecantikan yang diminati

Electronic-Word-of-Mouth (E-WOM)

Pengaruh Komunitas Online dan Electronic-Word-of-Mouth (E-WOM) Terhadap Niat Pembelian Pada Produk Somethinc dengan Kepercayaan Merek Sebagai Variabel Mediasi

Halo, terimakasih atas kesediaannya.
Perkenalkan, saya Fingky Warni Lastria Simbolon, dari Fakultas Bisnis dan Ekonomika, Program Studi Manajemen Universitas Atma Jaya Yogyakarta. Saat ini, saya sedang melakukan penelitian tugas akhir (skripsi) sebagai salah satu syarat kelulusan S1 dengan judul "Pengaruh Komunitas Online dan Electronic-Word-of-Mouth (E-WOM) Terhadap Niat Pembelian Pada Produk Somethinc, dengan Kepercayaan Merek Sebagai Variabel Mediasi".

Saya mengharapkan partisipasi Anda jika memenuhi kriteria berikut:

1. Mengetahui merek Somethinc
2. Pernah melihat ulasan produk Somethinc
3. Mengetahui platform beauty online community (seperti female daily dan sejenisnya) atau memiliki komunitas yang membahas produk kecantikan

Terimakasih telah meluangkan waktu untuk berpartisipasi dalam kuesioner ini.
Saya berharap Anda dapat memberikan jawaban yang jujur dan tepat, karena setiap informasi yang Anda berikan sangat berharga. Jika Anda memiliki pertanyaan lebih lanjut, Anda dapat menghubungi saya melalui fingky02lastria@gmail.com. Semua jawaban yang Anda berikan akan dijaga kerahasiaannya dan hanya digunakan untuk kepentingan akademis.

* Menunjukkan pertanyaan yang wajib diisi

Electronic-Word-of-Mouth (E-WOM)

Electronic-Word-of-Mouth (E-WOM) adalah bentuk komunikasi yang terjadi secara online dimana konsumen berbagi informasi, pengalaman, dan pendapat tentang produk atau layanan. Ini mencakup ulasan, komentar, dan rekomendasi yang diposting di berbagai platform digital seperti media sosial, forum, blog, dan situs ulasan. Sifat interaksi dalam E-WOM cenderung lebih satu arah, dimana satu individu memberikan ulasan atau rekomendasi yang dapat dibaca oleh orang lain.

Pengaruh Komunitas Online dan E-WOM Pada Niat Pembelian dengan Kepercayaan Merek Sebagai Variabel Mediasi
Fingky Wami Lastria Simbalon

Pengaruh Komunitas Online dan Electronic-Word-of-Mouth (E-WOM) Terhadap Niat Pembelian Pada Produk Somethinc dengan Kepercayaan Merek Sebagai Variabel Mediasi

** Menunjukkan pertanyaan yang wajib diisi*

Komunitas online

Komunitas online adalah kelompok orang yang berkumpul di platform digital untuk berdiskusi, berbagi informasi, dan berinteraksi satu sama lain berdasarkan minat atau tujuan yang sama. Interaksi bersifat dua arah atau lebih, di mana anggota dapat berdiskusi, bertanya, dan memberikan jawaban. Komunitas ini mendorong dialog dan kolaborasi antara anggota.

ABSTRACT

Effective marketing and advertising campaigns contribute to customer development, profitability, and business success in the long term. The evolving economies, globalization, and innovative technologies, which have quickly transformed the economic community, make present markets more attractive. Marketing firms are pushed in a new direction by social media marketing, such as Facebook, Twitter, and YouTube. Social media have reached so deeply into millions of people globally and it also has drawn the interest of advertisers. Considering the timeliness and relevance of the phenomenon, this study aims to identify the impact of online communities and e word of mouth on the purchase intention of generation Y. The relevant data were collected through a self-administered questionnaire from 150 individuals aged 25 to 40 years who are residing in the Colombo district based on the convenience sampling method. This study found a positive significant effect of e word of mouth on brand trust and purchase intention and the relationship between e word of mouth and purchase intention is mediate by the brand trust. Further, online communities have a positive significant impact on brand trust and the relationship between online communities and purchase intention is mediated by brand trust. This research fills the gap in the existing literature and provides valuable insights to organizations that use social media marketing as a communication tool.

Keywords: *Brand Trust, E Word of Mouth, Online Communities, Purchase Intention, Social Media Marketing*

1. INTRODUCTION

Technology plays a significant role in every person's everyday life in this modern world (De Mooij, 2019) and it has significantly influenced every aspect of peoples' lives and it resulted in massive changes in peoples' lifestyles and life patterns. The internet can be identified as one of the crucial parts of Technology that also has changed the world dramatically. The Internet is responsible for offering individuals, businesses, and others a place to communicate and various companies may advertise their products or services to increase their share of the market (Chaffey & Ellis-Chadwick, 2019). In addition to that consumers are using it for many reasons, including gathering online shopping information. It is said that buying through the internet is way more efficient (Manzoor, Baig, Hashim, & Sami, 2020).

When considering technology and the internet, social media is one of the key aspects that cannot be ignored. Social media growth is an impressive marketing tool for companies. Moreover, according to Irfan, Rasli, Sulaiman, Sami, & Qureshi, (2019) social media is an effective tool for economic growth as they provide two-way communication and low-cost marketing to obtain information, connect and establishment of relationships with their customers. The invention of the social media network has had a significant effect on business practices and has changed marketing strategies drastically (Irfan, Rasli, Sulaiman, Sami, & Qureshi, 2019). Social media has increasingly become one of the most influential youth networks today. As per Kaplan & Haenlein (2010) the use of social media is continuously increasing among Generation Y or "Boomerang Kids". As per Werenowska & Rzepka (2020) without technical innovations, a generation born after 1980 cannot imagine a world. Social media are an indicator of their existence. You may say that someone without a Facebook account is "not exist" and is not even exempt from social circles. Social media marketing is the newest marketing trend and business owners want to learn how to create their businesses' interest. Social media plays a very significant role in the decision-making process of consumers. Platforms such as Facebook, LinkedIn, YouTube, and Twitter have enabled customers' access to product reviews and other similar people in their communities.

People reach their social media communities for their opinions before they make shopping today (Hajli, 2015). Consumers use social media to access online groups, to get others' reviews, and to get a better understanding of a product or service (Dedeoglu, Taheri, Okumus, & Gannon, 2020). Social media is becoming more important in the fields of marketing, advertising, and communication with an annual rise in the number of users (Appel, Grewal, Hadi, & Stephen, 2020). Customers with a close relationship with a company share their social media experiences with other people and propose their company's products or services to their mates through positive words of mouth (Manzoor, Baig, Hashim, & Sami, 2020). Social media, therefore, becomes a priority for market intelligence, because advertisers understand the buying behavior of customers and understand why consumers feel as they do about those products (Rockendorf, 2011). These opportunities allow the marketer to build a dialog with the

customer and to refine the message and maintain the brand online marketing platforms (Evans & McKee, 2010).

Even though there is a continuous growth in social media development and usage the academic attention to understand the prospective context falls behind the industry. Some researchers have identified that still there is a gap in the existing literature (e.g.: Ebrahim, 2019; Manzoor, Baig, Hashim, & Sami, 2020). In addition to these research studies, local studies also have highlighted the existing research gap in social medial marketing (e.g: Perera & Uduwara, 2021). Considering the timeliness and importance of the phenomenon and practical and theoretical gaps that exist, this study is focused on identifying the impact of online communities and E word of mouth on consumer purchase intention. Accordingly, the research objectives are formed as, to examine the impact of E- word-of-mouth on consumer purchase intention, impact of online communities on consumer purchase intention, mediating effect of brand trust on the relationship between E word of mouth and purchase intention, and the mediating effect of brand trust on the relationship between online communities and purchase intention.

2. LITERATURE REVIEW

2.1. Social Media

According to Kaplan & Haenlein (2010), in 1979 the worldwide discussion system of Usenet was founded by Tom Truscott and Jim Ellis, from the University of Duke, which allowed internet users to post public messages. However, the era of social media as we understand it today probably began around twenty years previously, when Bruce and Susan Abelson created "Open diary" an early website for networking, where writers were brought together in one group. The word "Weblog" was first used concurrently and was truncated one year later as a "blog" when a blogger jokingly modified the noun "weblog" into a "we-blog" sentence (Kaplan & Haenlein, 2009b). High-speed internet access is increasingly widespread, leading to the establishment of social networking websites, such as MySpace in 2003 and Facebook in 2004. This coined the word "Social media" and contributed to its popularity today (Kaplan & Haenlein, 2009a). Social media can be defined as a digital-based software set, which is typically presented as applications and websites, and users can use it for sending or receiving digital content or information through an online social network. Social media is the leading platform with its features, including Facebook, Instagram, Twitter, and so on (Appel, Grewal, Hadi, & Stephen, 2020).

2.2. Social Media Marketing

As per Larimo & Leonidou (2021, p.54) SMM can be defined as "an organization's integrated pattern of activities that, based on a careful assessment of customers' motivations for brand-related social media use and the undertaking of deliberate engagement initiatives, transform social media connectedness (networks) and interactions (influences) into valuable strategic means to achieve desirable marketing

outcomes". Conventional media like newspapers and TV programs are still common and feasible mediums for advertising and make influence consumer behavior. Though, social media is becoming more dominant for companies because it allows ongoing and worldwide conversations. Consumers and businesses are more informed with real-time information and continuous social feedback, making informed decisions and fewer mistakes in their decisions through social media (Appel, Grewal, Hadi, & Stephen, 2020).

2.3. Generation Y

Those of Generation Y are also referred to as 'millennials,' which means that people born in 1980-2000 (Weranowska & Rzepka (2020). According to Main (2017) Generation Y is characterized by its openness to new ideas and ways of living and their confidence. This cohort's priorities differ from other cohorts, in that the Y-generation values convenience and focuses more on experiences rather than on products (Parets, 2019). In addition, individuals from Generation Y are known to have spent more time online than other cohorts. Generation Y individuals nevertheless balance real life with the online world as they came into the technological age (Thompson, 2018). According to Schawbel (2015), More than half the consumer of Y generation describes themselves as loyal to the brand and will repurchase the same product once they trust. However, before purchasing a decision or trusting a business, product, or service, Y consumers actively seek information (Jorg, 2017).

2.4. E Word of Mouth

Word of mouth provides customers with marketing information to the degree that it impacts their attitudes and behavior in respect of a product or service (Huete-Alcocer, 2017). E-WOM costs of informal Internet communication aimed at consumers and related to the usability or key properties of a product or service, or the brand that stands behind it. Furthermore, Huete-Alcocer (2017) stressed that the advantage of this tool is that each customer can take part, as everyone can share an online experience and post a product review for other users to read. The intensity of e word of mouth has also increased exponentially as social media and digital platforms grow (Al-Gasawneh & Al-Adamat, 2020). E word of mouth messages are easily exchanged among Internet users and are delivered in the form of online notifications, reviews, and recommendations and sources provide information about a product or service to present, past, and potential customers. This also provides businesses with the benefits of facilitating customer identification and also it is an affordable way for potential customers to connect (Al-Gasawneh & Al-Adamat, 2020).

2.5. Online Communities

According to Ray, Kim, & Morris (2014), online communities are new social structures that rely on modern information technology to function, and they face similar modern challenges. People of all ages

have turned to online communities for a variety of reasons, including discussing topics that are important to them, sharing knowledge, and reviewing products and services to educate and assist others (Kuem, Khansa, & Kim, 2020). Simmons (2008) argues that online communities function as virtual glues to quench customer desire to become part of a community. The information repositories of online communities must be fed with reliable and up-to-date information regularly; otherwise, their members' value will continue to shrink. As a consequence, the value of an online community is determined by the contributions of its members (Johnson, Faraj & Kudaravalli, 2014; Phua, Jin & Kim, 2017).

2.6. Consumer Purchase Intention

According to Oosthuizen, Spowart, & Meyer-Heydenrych (2015) purchasing intentions are based on behavioral science. The purchasing intention of consumers is defined as a combination of their interests and their willingness to buy a product. Purchase intentions are an attitudinal variable that can be used to estimate future contributions to product purchases. Since predicting future consumer behavior is a crucial problem for businesses, it should be estimated more specifically (Baabdullah, Alalwan, Rana, Kizgin, & Patil, 2019). The formation of a consumer's purchase intentions is influenced by their general attitudes toward a product (Cheruiyot & Maru, 2013). The more positive these attitudes are, the more likely people are to purchase (Manzoor, Baig, Hashim, & Sami, 2020). A similar definition was proposed by (Beneke, Flynn, Greig, & Mukaiwa, 2013; Faryabi, Fesaghandis, & Saed, 2015; Wu, 2015), all of whom focused on the willingness of consumers to purchase a specific product.

2.7. Brand Trust

Trust is defined as the customer believes that certain brands can fulfill needs and desires so that when clients have trust in the product, a repeated buying behavior is created, leading to brand engagement and establishing a relationship between brand and customer (Chinomona & Maziriri, 2017). According to McKinney & Benson, (2013) from a market point of view, trust is defined as a consumer willingness to return to a brand. Cakmak (2016) identifies brand trust as the consumer's intention toward the brand, taking account of consumer benefits and solutions, and the ability, capacity and needs to obtain the desires and needs of consumers. Chaudhuri & Holbrook (2001) believe that brand trust involves a carefully designed and carefully considered process. Kim, Kim, & Lee (2019) describes brand trust as a key factor to define the attitude of an individual in a company relationship. Managers must therefore see it as a key to business success.

3. HYPOTHESIS DEVELOPMENT

3.1. E Word of Mouth and Purchase Intention

Because of the vast changes in technology and the widespread use of the internet, which allows consumers to exchange consumption-related advice by engaging in online activities, the way consumers communicate with one another has changed dramatically. As a result of the internet, a less intimate but universal mode of communication known as electronic word of mouth has arisen (Brown, Broderick, & Lee, 2007; Xia & Bechwati, 2008). Studies have shown that when customers gather pre-purchase information (Zhu & Zhang, 2010; Adjei, Noble, & Noble, 2009), they are increasingly likely to accept online product feedback, which differs not just in quality but also in polarity from positive to negative comments (Sparks & Browning, 2011). Ladhari & Michaud (2015) identified that positive online comments about a particular hotel resulted in a significantly higher booking intention for it. In addition to that, Al-Debei, Alkroush, & Ashouri (2015) mentioned that EWOM evaluations may all affect customer outlooks, opinions, purchase decisions, and post-use evaluations. Moreover, Elseidi & El-Baz (2016) also identified that e word of mouth has a significant impact on purchase intention. Therefore, it is hypothesized that E word of mouth has a significant positive impact on consumer purchase intention among the Y generation.

H1: E word of mouth has a significant positive impact on consumer purchase intention

3.2. Online Communities and Purchase Intention

The advent of these online communities offers forums for online customers to share and exchange ideas, viewpoints, and product/service-related data. This creates tremendous opportunities for retailers, especially those who operate online. Accordingly, (Balakrishnan, Dahnil & Yi, 2012) identified that online communities have a significant impact on the purchase intention of consumers. Moreover, the lack of workable rules in online communities increases the value of trust (Ridings, Gefen, & Arinze, 2002). In addition to that, compared to conventional advertising components, customers consider social media as more trustworthy (Foux, 2006). It could be because social media provides interactive communication, provides direct feedback, and produces more objective content (Tatar & Eren-Erdoğan, 2016). Consequently, this study also hypothesized that online communities have a positive significant impact on purchase intention among Generation Y.

H2: Online communities have a significant positive impact on consumer purchase intention

3.3. Mediating effect of Brand Trust

A great deal of research support that brand trust mediates the relationship between e word of mouth and purchase intention. For an instance, Liao & Chung (2019) and Bhandari & Rodgers (2018) discovered that brand trust mediates the relationship between E word of mouth and purchase intention. However,

in social media literature there is little emphasis on this mediating effect especially, regarding Generation Y. Considering the findings of the prior studies, this study hypothesized,

H5: The relationship between E word of mouth and purchase intention is mediated by brand trust

H6: The relationship between online communities and purchase intention is mediated by brand trust

The following conceptual framework explains the study further and is also used to test the stated hypotheses of the study.

Figure 1: Conceptual Framework

3.4. Operationalization of Variables

Variable	Scale items	Source
E- Word of Mouth	EWOM1. I will go through the online information shared by people before making a purchase. EWOM2. I will seek the advice of people through online EWOM3. I trust other people's opinion which was shared online EWOM4. I like to gather the opinions of others through online before I buy a product EWOM5. Online opinions of others will not trigger me while I'm choosing a product	(Amsha, Poojitha, & Podile, 2020)
Online Communities	OC1. I will be discussing with my online community while buying a product OC2. I will have a conversation with my online community about buying a product that we see or heard through advertisements. OC3. I will have trust in my online community opinion OC4. My online communities ask for my advice regarding the product which they buy.	(Bateman, Gray, & Butler, 2011)

Purchase Intention	PI1. I think shopping on the internet saves my time. PI2. It is a great advantage for me to buy products at any time of the day PI3. Online shopping is as secure as traditional shopping PI4. The information given about the products and services on the internet is sufficient	(Manzoor, Baig, Hashim, & Sami, 2020)
Brand Trust	BT1. My brand gives me everything that I expect out of the product BT2. I rely on my brand BT3. My brand never disappoints me	(Sohail & Hasan, 2020)

4. METHODOLOGY

This research study followed a quantitative research approach and the research design is single cross-sectional. Necessary data was collected through a self-administered questionnaire from individuals who are between the ages of 25 years to 40 years using social media in the Colombo district. Consequently, the sample consisted of 150 individuals who are chosen through the non-probabilistic convenience sampling method.

The study emphasized on Generation Y who are in the age of 25 years to 40 years is as Kaplan & Haenlein (2010) outlined social media is continuously increasing among Generation Y or "Boomerang Kids". Moreover, according to Prensky(2001) members of Generation Y are referred to as "digital natives" rather than digital immigrants. They are the first generation to have grown up in a digital world, and information technology has had a huge influence on how they live and work (Bennett, Maton, & Kervin, 2008). In addition to that, the sample of the study was based on the Colombo district as it consists of the highest population and highest population density in Sri Lanka (Department of Census and Statistics, 2021). The sample size of the study was determined as per the guidelines of Krejcir & Morgan (1970). The researcher collected data based on the non-probabilistic convenience sampling method as participants of the sample are easily accessible to the researcher and this method is common because it can assess a large number of survey participants in a short period (Etikan, Musa, & Alkassim, 2016). Similar studies such as (Balakrishnan, Dahnil & Yi, 2012; Manzoor, Baig, Hashim & Sami, 2020) have employed convenience sampling as the sampling technique.

The research study was carried out in three steps. First of all, a literature survey was carried out to gather extensive information on the subject of study. Constructs have been operationalized by a thorough analysis of the literature (Manzoor, Baig, Hashim, & Sami, 2020; Hanaysha, 2016) and calculated in a 5-point Likert scale ranging from 1=strong disagree to 5=strongly agree. Second, there have been few expert reviews to guarantee the questionnaire's accuracy and applicability. Next, a pilot study of 20

respondents was carried out and the final questionnaire required adjustments were made based on the findings. Finally, there was a field study for data collection.

The developed questionnaire consisted of filter questions to select the most appropriate individuals for the sample group. Furthermore, the questionnaire consisted of two parts. First, the socio-demographic questions were included to determine the sample profile and the next part evaluated the e- word-of-mouth, online communities, consumer purchase intention, and brand trust.

4.1. Data Presentation and Analysis

Collected data were screened to identify the missing values and outliers. As the questionnaire was improved based on the findings of expert feedback and pilot tests, it makes it easier for the respondents to respond to the questionnaire, and therefore, there were very few missing values in the data set. Those missing values have been replaced by the median (Little & Rubin, 2002). Box plots were used to determine the existence of outliers (Aguinis, Gottfredson & Joo, 2013) and the seven cases were as outliers and were removed from the database.

In addition, factor analysis was performed to assess the uni-dimensionality of the constructs. All factor loadings were significant and were shown above 0.6 as recommended by (Hair, Black, Babin & Anderson, 2010). Afterward, the Normality of the data was tested using Skewness and Kurtosis values and according to the standard Skewness and Kurtosis values should be in between +2 and -2 for the data to be normally distributed. Accordingly, the Skewness and Kurtosis values are shown in Table 1.

Table 1: Results of Test of Normality

	Skewness		Kurtosis	
	Statistic	Std. Error	Statistic	Std. Error
E Word of Mouth	-0.409	0.198	-0.695	0.394
Online Communities	-0.395	0.198	-0.555	0.394
Consumer Purchase Intention	-0.805	0.198	0.075	0.394
Brand Trust	-0.357	0.198	-0.708	0.394

Source: Survey Data, 2020

The convergent validity of the data was tested using AVE value and CR values. As per the standard AVE values should be greater than 0.5 and CR values should be greater than 0.7. The outcomes of the convergent validity test were within the standard values ensuring the convergent validity of the data. Table 2 shows the results of convergent validity.

Table 2: Results of Convergent Validity Test

Variable	AVE	CR
E Word of Mouth	0.563	0.837
Online Communities	0.700	0.874
Consumer Purchase Intention	0.609	0.757
Brand Trust	0.500	0.749

Source: Survey Data, 2020

According to Hair, Black, Babin, & Anderson, (2010), discriminant validity indicates the extent to which a construct is distinct from other constructs. Consequently, to ensure the discriminant validity, all construct average variance extracted (AVE) estimates should be greater than the corresponding “squared inter-construct correlation estimates (SIC)”. When considering the reliability of the data, Cronbach’s Alpha values were used to test the internal consistency of the data. According to the standard Cronbach’s Alpha value should be higher than 0.07 The results of the discriminant validity and reliability tests were depicted in tables 3.

Table 3: Results of Discriminant Validity and Reliability Tests

	E Word of Mouth	Online Communities	Purchase Intention	Brand Trust	Cronbach's Alpha Value
E Word of Mouth	0.836				0.864
Online Communities	0.534	0.750			0.911
Purchase Intention	0.592	0.434	0.780		0.898
Brand Trust	0.606	0.651	0.650	0.707	0.832

Source: Survey Data, 2020

4.2. Sample Profile of the Study

The sample of the study is individuals aged 25 years to 40 years who are currently using social media platforms in Colombo district, Sri Lanka. In the sample, the majority are males (59.3%) who are engaging in managerial level jobs (32.0%). In addition to that, the majority of the sample is using Facebook, Whatsapp, and Instagram (36.7%) who purchase apparel (30.0%) through social media.

Table 4: Sample profile of the study

		Frequency	Percentage
Gender	Male	89	59.3
	Female	61	40.7
	Total	150	100.0
Occupation	Managerial Level	48	32.0
	Self-employed	37	24.7
	Trainee/intern	24	16.0
	Facebook, Instagram	32	21.3

Currently using Social Media Platforms	Facebook, Instagram, Whatsapp	55	36.7
	Facebook, Whatsapp	27	18.0
	Accessories	29	19.3
	apparels	45	30.0
	Beauty and Personal care products	34	22.7

Source: Survey Data, 2020

4.3. Correlation coefficients among variables

Table 5: Correlation coefficients

	E Word of Mouth	Online communities	Brand Trust	VIF
E word of Mouth	1			1.832
Online communities	0.534	1		1.669
Brand Trust	0.606	0.651	1	2.068
Purchase Intention	0.592	0.434	0.650	

Source: Survey Data, 2020

The correlation among variables is summarized in table 5. Accordingly, there are positive relationships across all variables and all values are significant at 0.99 level. The highest correlation among variables is 0.650 at a 99% confidence level, which shows between brand trust (mediating variable) and purchase intention (dependent variable). Furthermore, the highest VIF value is 2.068, which is below the standard level of 10 (Hair, Sarstedt, Ringle & Mena, 2012) which guarantees the absence of multicollinearity issues.

4.4. Mediation Analysis using PROCESS Macro

The hypothesized model was tested using bootstrap-based Hayes' PROCESS macro (Hayes, 2013). The PROCESS macro is a well-known 'statistical resampling technique that estimates the model's parameters and standard errors strictly from the sample. As compared to Baron and Kenny's (1986) causal step approach, this technique measures precise and correct confidence intervals for indirect effects.

Table 6: Regression results for simple mediation (E word of mouth as a predictor)

Predictor	β	SE	t value	p-value
Brand Trust (M)				
Constant	0.9548	0.3032	3.1484	0.002
EWOM (X)	0.7035	0.0759	9.2623	0.000
Model Summary				
	R	R ²	p-value	
	0.6058	0.3670	0.000	
Purchase Intention (Y)				
Constant	0.7336	0.2952	2.4850	0.014
EWOM (X)	0.3794	0.0900	4.2181	0.000
Brand Trust (M)	0.4786	0.0775	6.1790	0.000

Model Summary	R	R ²	p-value	
	0.6962	0.4848	0.000	
Indirect Effect of EWOM (X) on Purchase Intention (Y)				
	Effect	BootSE	BootLLCI	BootULCI
Brand Trust (M)	0.3367	0.0775	0.1968	0.5025

Source: Survey Data, 2020

Table 6 illustrates that E word of mouth positively impacts brand trust ($\beta = 0.7035$, $t = 9.2623$, $p = 0.00$). The R^2 of the model shows a value of 0.3670, which indicates that 36% of the variation of the brand trust is explained by E word of mouth. Besides, brand trust positively impacts purchase intention ($\beta = 0.4786$, $t = 6.1790$, $p = 0.00$) and E word of mouth positively impacts on purchase intention and purchase intention ($\beta = 0.3794$, $t = 4.2181$, $p = 0.00$). Considering the R^2 value it can conclude that 48% of the variance of the purchase intention is explained by E word of mouth and brand trust ($R^2 = 0.4848$). The indirect effect of E word of mouth on purchase intention is significant and positive since the resulting confidence interval of bootstrapping does not include zero ($CI = 0.1968, 0.5025$), which indicates that brand trust mediates the relationship between E word of mouth and purchase intention.

Table 7: Regression results for simple mediation (online communities as a predictor)

Predictor	B	SE	t value	p-value
Brand Trust (M)				
Constant	1.7825	0.1933	9.2223	0.000
Online Communities (X)	0.5654	0.0543	10.4199	0.000
Model Summary	R	R ²	p-value	
	0.6505	0.4232	0.000	
Purchase Intention (Y)				
Constant	1.4743	0.2535	5.8166	0.000
Online Communities (X)	0.0181	0.0747	0.2423	0.808
Brand Trust (M)	0.6630	0.0859	7.7184	0.000
Model Summary	R	R ²	p-value	
	0.6501	0.4226	0.000	
Indirect Effect of Online Communities (X) on Purchase Intention (Y)				
	Effect	BootSE	BootLLCI	BootULCI
Brand Trust (M)	0.3749	0.0747	0.2463	0.5291

Source: Survey Data, 2020

According to Table 5, online communities have a positive impact on brand trust ($\beta = 0.5654$, $t = 10.4199$, $p = 0.000$). The R^2 of the model shows a value of 0.4232, which indicates that 42% of the variation of brand trust is explained by online communities. When considering about online communities and purchase intention, it shows an insignificant impact ($\beta = 0.0181$, $t = 0.2423$, $p = 0.808$). Besides, brand trust positively impacts purchase intention ($\beta = 0.6630$, $t = 7.7184$, $p = 0.000$). Considering the R^2 value of the model, it can conclude that 42% of the variance of the purchase intention is explained by online communities and brand trust ($R^2 = 0.4226$).

The indirect effect of online communities on purchase intention is significant and positive since the resulting confidence interval of bootstrapping does not include zero (CI=0.2463, 0.5291), which indicates that brand trust mediates the relationship between online communities and purchase intention.

5. DISCUSSION AND CONCLUSION

Among the advanced technologies exists the Internet and social media are key aspects that cannot be ignored. Considering social media networks, it has affected business practices and also changed marketing strategies drastically (Irfan, Rashi, Sulaiman, Sami & Qureshi, 2019). Moreover, social media can be identified as an effective communication tool that provides two-way communication and low-cost marketing to obtain information, connect, and establishment of relationships with their customers. Among Generation Y or “Boomerang Kids” the use of social media is continuously increasing (Kaplan & Haenlein, 2010). People tend to reach online communities to get a thorough understanding from the reviews of other people about the product or service that they are going to purchase. Customers who have a good prior experience with a brand or product, tend to recommend those products to others through positive word of mouth. Therefore, social media becomes the main concern in market intelligence, as marketers have the opportunity to understand consumer behavior, and through is understanding, marketers can redefine their communication strategies to build up long-term relationships with their customers. Accordingly, the main aim of this research study is to “identify the impact of online communities and e word of mouth is social media on purchase intention of generation with the mediating effect of brand trust”. The summary of the results obtained through the analysis is shown in table 8 and figure 2.

Table 8: Summary of Hypotheses testing

Hypothesis		Survey findings
H1	E word of mouth has a significant positive impact on consumer purchase intention	Supported
H2	Online communities have a significant positive impact on consumer purchase intention	Rejected
H3	The relationship between E word of mouth and purchase intention is mediated by brand trust	Supported
H4	The relationship between online communities and purchase intention is mediated by brand trust	Supported

Figure 2: The Summary of PROCESS Macro Results

Source: Compiled by Author

The results from the study show that E word of mouth has a significant positive impact on purchase intention as well as on brand trust. Moreover, brand trust mediates the relationship between e word of mouth and consumer purchase intention. On the other hand, online communities have a significant positive impact on brand trust but, it shows an insignificant impact on the purchase intention while brand trust mediated the relationship between online communities and purchase intention. It can conclude that online communities do not directly impact purchase intention, but if brand trust is created through online communities then consumers tend to purchase a particular product or service.

When considering the prior literature, similar results were found in different products and service contexts. Referring to the automobile industry, Jalilvand & Samiei, (2012) have identified that e word of mouth has a strong positive impact on consumer purchase intention. Moreover, they have mentioned that both practical experiences and previous studies revealed that customers are increasingly keen to write and to read positive and negative experiences in an online WOM context. In addition to that when considering about travel and hospitality industry, Jalilvand & Samiei, (2012) has also identified that e word of mouth plays a crucial role in increasing tourists' travel intentions, creating a favorable destination image, and reducing promotional expenditure. Mehryar, Saeed & Baroom, (2020) also proved the positive impact of e word of mouth on consumer purchase intention and stressed that the ease of understanding message (reviews/comments) (EWOM quality) and the amount of message through social websites (EWOM quantity) will be able to influence on the purchasing intention of prospects customers. When considering the impact of e word of mouth on brand trust, the results indicate a positive significant impact and this is further proved by Renteria-Garcia, Fajardo-Toro & Sabogal-Salamanca, (2021). They further mentioned that consumers have more resources to get information about the product or service when considering a purchase online than those offered by the

retailer or manufacturer. These new resources are generated by customers and therefore are more trustworthy to consumers who suggest purchasing a product.

As per the findings of the study, the relationship between e word of mouth and purchase is mediated by brand trust. This finding is further proved by (Liao & Chung, 2019). In their research study, they found that word of mouth is positively related to purchase intention and brand trust. Moreover, they found brand trust mediated the relationship between word of mouth and purchase intention. Bhandari & Rodgers, (2018) have also identified that the relationship between E word of mouth and purchase intention is mediated by brand trust.

This study indicates that online communities are positively related to brand trust. Jung, Kim & Kim, (2014) and Ulusu, Erdem & Durmuş, (2016) also identified the positive impact of online communities on brand trust. Furthermore, this study resulted in an insignificant impact on online communities and purchase intention. But, Balakrishnan, Dahnul & Yi, (2012) have identified a positive effect of online communities on purchase intention. Moreover, as per the findings of this study, even though online communities are not directly affected by purchase intention, online communities have an indirect effect on purchase intention. From a practical stance, it could be argued that the reviews, comments, and interactions within an online community which are capable to create brand trust subsequently affect purchase intention.

6. IMPLICATIONS OF THE STUDY

Even though social media marketing plays a vital role at present, the number of prior studies conducted on identifying the impact of e word of mouth and online communities on purchase intention with the mediating effect of brand trust in generation Y is very low. Therefore, this study provides valuable insights into the development of both theoretical and managerial aspects of the social media marketing sector. As mentioned above, the scholarly attention given to understanding the factors affecting purchase intention in social media marketing among generation Y is very low in both local and global contexts. Therefore, this study fills the gap in the existing literature by adding knowledge on E-word of mouth, online communities, purchase intention, and brand trust, particularly on generation Y.

As managerial implications, this study provides valuable insights to marketers who are using social media as a communication platform. When they are creating brands or online communities they should concentrate on factors that create brand trust among the customers which ultimately drives to create purchase intention. Moreover, as e word of mouth has a significant effect on purchase intention and brand trust if there is a possibility of spreading negative e word of mouth, it will badly affect brand trust and purchase intention. Therefore, organizations should take necessary steps to manage the spread of negative e word of mouth. Most importantly, when organizations are offering their products and services to the customers they should highly concern about the quality of the products and services

because with the development of social media even a small mistake of the organization can be spread viral and can adversely affect the brand trust and purchase intention.

7. LIMITATIONS AND FUTURE RESEARCH SUGGESTIONS

This research study contains several limitations. Firstly, when considering the sample of 150 respondents who are residing in the Colombo district is a significant limitation of the study. Next, as this study is limited to a quantitative approach, the research was unable to explore some of the important insights from the respondents. Therefore, as future research suggestions, we can recommend following a qualitative approach which will provide an opportunity to explore valuable responses from the sample. Moreover, this study can be extended geographically to other districts of Sri Lanka or can be conducted as a comparative study comparing two geographic areas.

In addition to that this study only takes into account brand trust as a mediating variable and purchase intention as the dependent variable. Future research studies can be done incorporating variables such as brand image, customer revisit intention, and so on as mediating variables and brand equity, brand loyalty, etc. as dependent variables.
