

BAB 8

KESIMPULAN DAN SARAN

8.1. Kesimpulan

Berdasarkan pembahasan pada bab-bab sebelumnya maka dapat ditarik kesimpulan sebagai berikut:

- a. Penyusun struktur hierarki terdiri dari 3 kriteria, 8 sub kriteria, 2 alternatif dan 10 sub alternatif.
- b. Muncul faktor baru pada penelitian ini dimana faktor tersebut belum digunakan pada penelitian sebelumnya yaitu prosentase penurunan kualitas. Faktor ini menjadi sub kriteria probabilitas ketidaksesuaian.
- c. Urutan prioritas supplier dengan metode AHP adalah supplier D (besar), B (besar), H (besar), I (kecil), J (kecil), K(kecil), M (kecil), L (kecil), F (besar) dan E (besar) sedangkan urutan prioritas supplier dengan metode FAHP adalah supplier D (besar), B (besar), H (besar), I (kecil), K(kecil), J (kecil), M (kecil), L (kecil) dan E (besar), F (besar).
- d. Hasil metode AHP dapat memilih 10 supplier dengan urutan yang pasti sedangkan hasil metode FAHP hanya dapat memilih 8 supplier dengan urutan yang pasti.
- e. Metode yang terbaik diterapkan pada kasus penelitian ini adalah metode AHP.
- f. Dalam kasus penelitian ini, metode FAHP tidak perlu untuk diterapkan.
- g. Alokasi order bahan baku berdasarkan hasil dari metode AHP dan urutan prioritas supplier yang disesuaikan dengan kemampuan supply masing-masing supplier.

8.2. Saran

Pemenuhan kebutuhan bahan kulit kambing PT.ASA selama ini dilakukan berdasarkan kebiasaan. Oleh karena itu, PT. ASA perlu menentukan supplier dan alokasi order berdasarkan urutan prioritas supplier.
